TREASURER, PAST PRESIDENT, NINE
COMMITTEEPERSONS)

NATIONAL SKEET SHOOTING ASSOCIATION (NSSA)

Legend : The Direction of arrows flows from the Authoritative Entity terminating in an arrowhead at the entity that reports to that Authoritative Entity.
Solid Thick Lines represent Direct Line Authority.
Solid Thin Lines represent Limited General Authority.
Dotted Thin Lines represent Limited Authority only in specific areas.

Information Technology

Brad Jones, IT Manager / Network Administrator

We completed the process of moving our website to new servers. Performance has improved, though our database does sometimes get overwhelmed by the number of queries being processed. Some things just take time to run. We did have a couple issues with the new website configuration. Right after switching over to the new Linux server, the website would not come up. Turned out the new website written appeared to point to standard file locations, but there were several links to a "development" folder not copied. We are not experts in Linux, however, Rackspace has the experts and they solved the issue and pointed all links to the standard Apache HTML folder. Overall, I must say, we are pleased with the better performance results and additional disk space.

Microsoft Windows 10 is still in the early stages of deployment. While building up new computers, we have started experiencing error messages from Microsoft Windows Update using Windows 7 literally stating the hardware is too new and will not be supported by Microsoft with Windows 7. Microsoft is being very blunt and to-the-point - time to upgrade. So, we are installing it on the new computers we are deploying, and beginning an upgrade process for computers that have a lot of job specific applications installed. Finance's applications have all been performing fine, though we did find that the E-Doc scanners and software being used were not compatible. We will have to purchase new scanners and software for the 4 other employees scanning documents, so they can be upgraded to Windows 10.

In addition to the Windows 10 migration, we are planning on upgrading our other 3 main servers to Windows Server 2016. We have had no problems with the primary file server we installed it on last year, and will be upgrading our Magazine fileserver, main Backup server and our Database server. They are currently running Windows Server 2008, which Microsoft will be dropping support for so, for security and stability purposes, they need to be brought up to date.

Prior to the World Skeet Championship last year, we did upgrade our Internet service. We had been running at 20 MB, which was suffering from some problems with our email in the Office 365 cloud. We moved to a 100 MB service just in time for the large number of shooters for our fall shoots. Our issues with slow email have been significantly reduced, as has the time to update our website with changes to the members information.

National Shooting Complex

Year End Report – 2017

- Corporate Events
 - 54 Events
 - 1,789 Participants
 - 100,150 Targets – All Sporting

- Fundraiser Events
 - 50 Events
 - 8,044 Participants
 - 806,980 Targets – All Sporting

- Non-Registered Tournaments
 - 9 Events
 - 3,510 Participants
 - 1,081,425 Targets
 - 335,900 Sporting
 - 23,200 Super Sporting
